## UV GEL SYSTEM

### SCULPTING ON A FORM (1 OF 2)

#### STEP 1:

Thoroughly prepare the natural nail by pushing back the eponychium and removing the true cuticle. Gently remove the shine using an **Endurance 180/180 Grit File** or higher file. Saturate a **Nail Wipe** with **Nailpure Plus**, and wipe it across the natural nail to cleanse, dehydrate, and protect.

#### STEP 2:

Remove the paper backing and the center of the **Balance Clear UV Gel Form**. It is important to use clear forms to allow the UV energy to bounce off the deck of the lamp and thoroughly cure the gel from the underside and top of the enhancement.

#### STEP 3:

Fit the form snugly to the underside of the natural nail and pinch the tabs together.

#### STEP 4:

Apply a liberal amount of **Balance Bond (Acid-Free) Primer** to the entire surface of the natural nail. Allow it to dry for one minute. When dry, the nails will not appear chalky white.

#### STEP 5:

Apply **Balance Radiant White** using a **Touch Tip Kolinsky Brush #5** near the natural free edge line. Twirl the brush to release and slightly warm the gel. Create the smile line and begin to stretch the gel to form the extension. Wipe any gel residue from the brush on a clean, lint-free **Nail Wipe** and back brush the smile line to make it smooth and crisp. Cure for 2 minutes in any full hand UV lamp.

## UV GEL SYSTEM

### SCULPTING ON A FORM (2 OF 2)

#### STEP 6:

Using the flattened side of a **Touch Tip Kolinsky Brush #5**, gather a medium amount of **Balance Builder Sheer Pink Gel**. Starting in Zone 3, stretch and pull the gel over the entire length of the nail to create a thin "lock-in" base layer. Cure in any full hand UV lamp for 90 seconds. Without removing the tacky layer, apply a second coat of **Balance Builder Sheer Pink Gel** and cure again.

#### STEP 7:

Remove the tacky layer with a **Nail Wipe** lightly saturated with **Cleanse**. File, shape, and refine the nails. Remove any excess dust with a **Plush Brush**. Use a **Nail Wipe** lightly saturated with **Cleanse** to further remove any dust that may be hiding in the sidewalls.

#### STEP 8:

Using the flattened side of the **Touch Tip Kolinsky Brush #5**, apply a medium amount of **Balance Finish Clear Gel** to the entire nail surface. Be sure to seal and cap all edges. Cure in any full hand UV lamp for 90 seconds. Remove tacky dispersion layer using a **Nail Wipe** lightly saturated with **Cleanse**.

#### STEP 9:

Apply **Nurture Oil** to the cuticle and massage in to complete the service.
