

Polish Pro

LED/UV Gel Polish

Polish Pro Gel Polish — A revolutionary gel polish formula that lasts 2-3 times longer than a natural nail manicure, without chipping, smudging or cracking. Polish Pro is light-cured, soaks off in minutes and is available in an ever-expanding array of shades.

BIORIUS, RUE DE LA CROYERE 10A, BE-7170 MANAGE

NATURAL NAIL PREP

1. Spray your and your clients' hands with *Purify* and gently massage. *Purify* will help reduce the spread of germs.
2. After shaping the free edge of the natural nail, gently push back the eponychium, and remove any non-living tissue.
3. Remove the shine from the natural nail using the buffer side of your *Endurance 180/240 Grit Buffer*. File following the contour of the nail and moving the file in the direction of nail plate growth. Remove excess dust with your *Plush Brush*.
4. Using a *Nail Wipe* saturated with *Nailpure Plus*. Press and rub into natural nail, side walls, and under the free edge to remove oil, moisture, and contaminants. Allow the natural nail to become chalky white.

PRODUCT APPLICATION - POLISH PRO COLOUR

1. Apply an even layer of *Essential Base Coat* to all five fingers. Be sure to cap the free edges. Cure in the *Dual Cure Lamp*, LED for 30 seconds or UV for 2 minutes.
2. Choose a *Polish Pro Colour*, shake well before use. Apply a thin even layer. The first layer may look translucent. Cure in the *Dual Cure Lamp*, LED for 30 seconds or UV for 2 minutes. Apply a second layer of colour (for full coverage) and cure again.
3. Apply a layer of *Essential Seal*. Be sure to cap the free edges. Cure in the *Dual Cure Lamp*, LED for 30 seconds or UV for 2 minutes.
4. Remove the tacky dispersion layer using a *Nail Wipe* saturated with *Cleanse*. Condition the cuticle and surrounding skin with *Nurture Oil*.

PRODUCT APPLICATION - POLISH PRO FRENCH

1. After proper nail prep, apply an even layer of *Essential Base Coat* to all five fingers. Be sure to cap the free edges. Cure in the *Dual Cure Lamp*, LED for 30 seconds or UV for 2 minutes.
2. Choose a nude *Polish Pro*, shake well before use. Apply a thin even layer. The first layer may look translucent. Cure in the *Dual Cure Lamp*, LED for 30 seconds or UV for 2 minutes. Apply a second layer of colour (for full coverage) and cure again.
3. Choose a white *Polish Pro*, shake well before use. Remove the brush from the bottle and wipe the backside of the brush on the lip of the bottle, to remove some of the excess. Brush onto the nail to create a smile line. Be sure to cap the free edges. Cure in the *Dual Cure Lamp*, LED for 30 seconds or UV for 2 minutes. It is optional to repeat application for fuller coverage.
4. Apply a layer of *Essential Seal*. Be sure to cap the free edges. Cure in the *Dual Cure Lamp*, LED for 30 seconds or UV for 2 minutes.
5. Remove the tacky dispersion layer using a *Nail Wipe* saturated with *Cleanse*. Condition the cuticle and surrounding skin with *Nurture Oil*.

REMOVAL

There are two easy methods for Polish Pro removal.

1. Remove the shiny shield of the *Essential Seal* with an *Endurance 180/180 Grit File*.
2. Place the tips of the fingers into a bowl of *Soothing Soak Off Remover*. This will keep your clients' hands hydrated and pampered during removal.
3. Continue to file and soak until product is completely removed. The product will go frilly around the edges of the enhancement. When ready it will be soft. Use an orange stick or equivalent tool to peel off the remaining product.

OR

1. Buff the shiny shield of *Essential Seal* with an *Endurance 180/180 Grit File*.
2. Saturate a *Nail Wipe* with *Soothing Soak Off Remover*, folding it around the nail, and wrap the fingertip in a small piece of aluminum foil and allow body heat to activate removal.
3. *Soothing Soak Off Remover* can easily remove the product in 20 minutes. Simply slide off any excess with an orangewood stick. At this time your nails are ready for reapplication of *Polish Pro*, or wash hands with warm water and soap, condition with *Nurture Oil*.

POLISH PRO FAQs:

WHAT IS POLISH PRO?

Rather than simply a blend of gel and polish, *Polish Pro* is a fusion of unique ingredients that result in the most resilient natural nail manicure or pedicure. These ingredients include a special blend of oligomers, cross linkers, photo initiators, resin and other ingredients, all making up what NSI calls a Poly-Oligomer.

HOW LONG DOES IT LAST?

Polish Pro goes on as simply as applying regular nail polish, but wears 2-3 times longer than your natural nail manicure without smudging, chipping or peeling. It may last longer on some clients. It is also perfect for pedicures and may last up to four weeks on toes.

HOW IS IT APPLIED?

See the simple step-by-step instructions (reverse side).

Shake *Polish Pro Colours* vigorously to completely disperse the proprietary ingredients. The key to perfect application is to use thin layers for a perfect cure, longer wear, and quick removal. Capping the free edges with the *Essential Base Coat* and *Essential Seal* will ensure long-lasting wearability.

HOW IS IT REMOVED?

There are two easy methods. The first is by placing the tips of the fingers in a bowl of *Soothing Soak Off Remover*. The second is by saturating a *Nail Wipe* with *Soothing Soak Off Remover*, folding it around the nail, and surrounding the wipe with a small piece of aluminum foil. Use an orange stick to slide off any excess.

DO I NEED TO DO A "DRY" MANICURE FIRST?

Yes. To perform a "dry" manicure; shape the free edge of the natural nail and gently push back and remove the cuticles with an orangewood stick or other implement. A light buffing to remove surface oils will improve adhesion.

HOW CAN I PERFECT MY SMILE LINES WHEN DOING A FRENCH?

Use a *Touch Tip Kolinsky #5*, either dry or slightly damp with *Cleanse*, to back brush and crisp your smile lines.

HOW MUCH CAN I CHARGE?

Clients will be willing to pay 50%-100% more than they would for a traditional polish manicure in exchange for chip-free, worry-free, long-lasting colour that removes quickly and easily without any damage to the natural nail.

CAN I USE POLISH PRO OVER TRADITIONAL HARD GEL OR ACRYLIC ENHANCEMENTS?

Polish Pro can be applied over other enhancement materials, but keep in mind that *Soothing Soak Off Remover* or *Acetone* used to remove *Polish Pro* may breakdown the integrity of the existing enhancement. Using it over traditional gel enhancements is your best bet, because the gel nail enhancement is non-porous and will not be harmed during the removal of *Polish Pro*.

CAN I USE ANY UV OR LED LAMP?

Polish Pro's photo initiators are formulated to be cured in both lamps. You can use your existing UV lamp that has three to four 9-watt bulbs for a full and thorough cure. The *Polish Pro Colours*, *Top Coat* and *Polish Pro Base Coat Plus* will cure in 2 minutes.

Not all LED lamps are created equal. LED lamps vary in quality and design. *Polish Pro* will work with most high quality, top brand LED lamps. NSI recommends using the *Dual Cure Lamp* with the *Polish Pro System*. *Polish Pro* will cure in 30 seconds in a LED Lamp. Always be sure to check with your nail lamp's manufacture for a proper cure time.

HOW MANY SERVICES FROM EACH BOTTLE?

Each 15 mL (.5 Fl. Oz.) bottle of colour will yield 20 services.

Because NSI does their own research, development, and manufacturing, they are able to offer the highest quality products at competitive prices, which simply means MORE MONEY in your pocket.

WHAT IS THE BEST WAY TO STORE IT?

All nail products should be stored in a cool, dark area. Be sure to keep the caps tightly in place between clients.
